Corium, also called fuel-containing material (FCM) or lava-like fuel-containing material (LFCM), is a material that is created in the core of a nuclear reactor during a meltdown accident. It resembles natural lava in its consistency. It consists of a mixture of nuclear fuel, fission products, control rods, structural materials from the affected parts of the reactor, products of their chemical ...

Corium (nuclear reactor) - Wikipedia

Power-velocity (P-V) mapping (14-16), which directly relates product quality (density or porosity) to the process parameters (sometimes with hatch spacing), is an effective but heuristic tool for LPBF users. One of the missing pieces in the physical foundation of P-V maps is whether the so-called "keyhole porosity boundary," which separates processing conditions that produce nominally ...

Critical instability at moving keyhole tip generates porosity ... - Science

Plutonium is a radioactive chemical element with the symbol Pu and atomic number 94. It is an actinide metal of silvery-gray appearance that tarnishes when exposed to air, and forms a dull coating when oxidized. The element normally exhibits six allotropes and four oxidation states. It reacts with carbon, halogens, nitrogen, silicon, and hydrogen. When exposed to moist air, it forms oxides and ...

Plutonium - Wikipedia

The new project quickly gained momentum, with a website and code repository 21 appearing in February, and a mailing list announced 22 in June 2001. By August 2001, a first release was announced 23 ...

Mainly, monazite from beach placers is mined in India as the principal ore mineral for REE, although xenotime holds out some prospect for the future. Of India's estimated reserve of 5 million tons of monazite, 70%-75% which occurs in beach placers and the rest in the inland and offshore areas. Monazite content of beach sands may be up to 11 wt.%.
