An actuator is a component of a machine that is responsible for moving and controlling a mechanism or system, for example by opening a valve. In simple terms, it is a "mover". An actuator requires a control device (controlled by control signal) and a source of energy. The control signal is relatively low energy and may be electric voltage or current, pneumatic, or hydraulic fluid pressure, or ...

The most popular pneumatic actuator style uses compressed air acting on a piston inside a cylinder to move a load. Single-acting cylinders have a single port (air inlet) to extend the piston; an internal spring or sometimes gravity retracts the piston. Double-acting cylinders have separate ports to extend and retract the piston.
