int86() function: The int86() is a C library function that facilitates access to bare bone DOS and BIOS service interrupts. It is a wrapper over inline assembly interrupt call. It takes CPU register values with object to a structure where member variables are equivalent to CPU registers. It takes three arguments. // Declaration syntax `int int86(int intno, union REGS* inregs, union REGS* outregs);`

Mouse Programming in C/C++ - GeeksforGeeks

Well, in the socket's basic tutorial you might have had a confusion that we define socket as: `S = socket.socket(socket_family, socket_type, protocol = 0)` But, in the last tutorial covering TCP sockets we defined TCP socket by merely writing `S=socket.socket()`, that is without providing the `socket_family` and the `socket_type`. If we do not mention the `socket_family` and `socket_type`, then by default ...
