Carbon capture and storage in Australia - Wikipedia

Carbon capture and sequestration/storage (CCS) is the process of capturing carbon dioxide (CO₂) formed during power generation and industrial processes and storing it so that it is not emitted into the atmosphere. CCS technologies have significant potential to reduce CO₂ emissions in energy systems. Facilities with CCS can capture almost all of the CO₂ they produce (some currently ...

What is BECCS? Bioenergy with carbon capture and storage (BECCS) is a carbon removal technique that depends on two technologies. Biomass (organic material) is converted into heat, electricity, or liquid or gas fuels (the “bioenergy” step), and the carbon emissions from this bioenergy conversion are captured and stored in geological formations or embedded in long-lasting products (the ...
