This is more an invitation to share than a question per se. I recently installed a two-zone Mitsubishi minisplit system in our home. One of the two indoor units is ducted and its blower continued to run even after the temperature set point had been reached. I understand this is normal operation for these units (and maybe for all/most minisplits?). I also realize there is a reasonable to case ...

As of this release, every zone media player will be located in its own Home Assistant device. For single zone devices, nothing will change and all your automations, scripts, scenes, etc., should work in the same way as before. A new device will be created for multi-zone devices for every non-main zone (e.g., zone2 or zone3).

The FA20E and FA20F engines have a cast aluminium alloy cylinder head with chain-driven double overhead camshafts per cylinder bank. The four valves per cylinder – two intake and two exhaust – were actuated by roller rocker arms which had built-in needle bearings that reduced the friction that occurred between the camshafts and the roller rocker arms.
