Lead, the most abundant nonessential heavy metal in Earth's crust, is also one of the most common environmental toxicants released by human activity (1, 2). Although clinically relevant exposure to anthropogenically released lead has been documented for multiple wildlife taxa (), the population-wide demographic effects of this exposure are, for nearly all species, completely unknown.

In the long-running BBC television science fiction programme Doctor Who and related works, the term "companion" refers to a character who travels or shares adventures with the Doctor. In most Doctor Who stories, the primary companion acts as an audience surrogate. They provide the lens through which the viewer is introduced to the series. The companion character often furthers the story by ...
