This course is dedicated to one of the main areas of electrical engineering: power system analysis. Power system analysis is the core of power engineering and its understanding is therefore essential for a career in this field. In this course, you will learn about power flow (load flow) analysis and short circuit analysis

and their use in power systems. The course is divided into the following sections:

Power System Analysis - Load Flow and Short Circuits
A systematic reporting of all aspects of the electric power field, including coverage of both hydro- and thermal-generating plants. * Thorough coverage of both static and dynamic operations of power systems. * A global perspective from both an academic and industrial point of view. * Emphasis on the important relations between operations and control devices, including useful considerations for ...
