Time series analysis is a statistical technique dealing with time series data. According to Spiegel, "A time series is a set of observations taken at specified times, usually at equal intervals." In statistics, for time series analysis two main categories of models are popular. Let us discuss the Models of Time Series Analysis in details.

Least Square is the method for finding the best fit of a set of data points. It minimizes the sum of the residuals of points from the plotted curve. It gives the trend line of best fit to a time series data. This method is most widely used in time series analysis. Let us discuss the Method of Least Squares in detail.
