The Labyrinth of Star Formation . By Dimitris Stamatellos, Simon Goodwin and Derek Ward-Thompson. Abstract. In this very brief introductory chapter I pay tribute to Anthony and give a little of his background, family and upbringing. I briefly outline his education and schooling. I describe a few of his research results.

Star - Star - Star formation and evolution: Throughout the Milky Way Galaxy (and even near the Sun itself), astronomers have discovered stars that are well evolved or even approaching extinction, or both, as well as occasional stars that must be very young or still in the process of formation. Evolutionary effects on these stars are not negligible, even for a middle-aged star such as the Sun.

Recent studies of nearby interstellar clouds with the Herschel Space Observatory have provided us with unprecedented images of the initial conditions and early phases of the star formation process. The Herschel images point to the central role of filaments in star formation and to their likely connection to interstellar turbulence.
